

**Designer: ZIKICO**

The Temo Honey Dipper scoops honey quickly and cleanly. According to beekeepers, honey changes nutritional content when it touches metal products. As this product is made entirely of zirconia, the quality of the honey is not affected.

When scooping honey, the equipment cuts drips when rotated it in a horizontal position. The honey flows down quickly when it is tilted to the vertical position. This function is realized by separating 4 zirconia blades.

Dimensions: L16 x W20 cm

Primary Material: Innovative materials

Primary Color: White

Customization: This product is not customizable.
